

How Cron Jobs works

With Cron Jobs, you can spare a lot of time by **automating some repetitive processes**.

You can, in fact, **schedule tasks** to run at a specified frequency.

Let's see how it works! 🔍

1. How it works ⚙️

From **Admin > Cron Jobs** you can automate some specific processes according to your integrations.

Archive Orders 📁

This Cron Job **automatically archives your orders**. So you don't have to do it every day. It's particularly useful when dealing with **lots of orders a day**.

You'll need to archive orders once the shipping label is printed, the status is **completed**, marketplace updated and shipments transmitted to the carrier.

To put this process in autopilot, you'll only need to **set the time** when you'd like the platform to archive orders for you and enable the cron job.

Job	Time	Enabled
 Archive orders Archive the orders in the "Your orders" page having status completed, labels printed, marketplace updated and shipments transmitted to the carrier	23 00	<input type="checkbox"/>

Save

Once enabled, you'll see the last execution date and time.

Sales Channels Update

After printing your shipping labels, you can decide to **update your orders in** your marketplaces or sales channels **manually or automatically**.

When you connect your sales channels, you can choose to let the platform update them automatically or do it **manually**, with the **Cron Job**.

Also for Sales Channels, you can set your Cron Job by selecting time and enabling it.

 Amazon Update the orders on the marketplace displayed in the "Your orders" page having status completed and labels printed	00 00	<input type="checkbox"/>
 eBay Update the orders on the marketplace displayed in the "Your orders" page having status completed and labels printed	00 00	<input type="checkbox"/>

Save

Carrier Update

With the platform, it's possible to update your Carriers automatically as soon as the status of your shipment is complete.

However, you can set to **close your Work Day manually** and update your Carrier at a specific time of the day.

You can do it as usual, by setting the time and enabling the Cron Job.

 GLSitaly (GLS) Confirm the shipments to the carrier displayed in the "Your orders" page having status completed and labels printed	00 00	<input type="checkbox"/>
 BARTOLINI (BRT) Confirm the shipments to the carrier displayed in the "Your orders" page having status completed and labels printed	00 00	<input type="checkbox"/>
